

# Short-Term Panel Requests: Improving Catch Estimation Methods in Sparsely Sampled Mixed-Stock Fisheries.

Nick Grunloh<sup>a</sup>, Edward Dick<sup>b</sup>, Don Pearson<sup>b</sup>, Marc Mangel<sup>a,c</sup>, John Field<sup>b</sup>

June 4, 2018

<sup>a</sup> Center for Stock Assessment Research, University of California, Santa Cruz, Mail Stop SOE-2, Santa Cruz, CA 95064, USA.

<sup>b</sup> Fisheries Ecology Division, Southwest Fisheries Science Center, National Marine Fisheries Service, National Oceanographic and Atmospheric Administration, 110 McAllister Way, Santa Cruz, CA 95060, USA.

<sup>c</sup> Department of Applied Mathematics and Statistics, Jack Baskin School of Engineering, University of California, Santa Cruz, Mail Stop SOE-2, Santa Cruz, CA 95064, USA.

# 1 Diagnostic template and full predictive performance

## 2 Time model and prior sensitivities

### 3 Diagnostic sensitivity to alternative time-blocking

## 4 Species:Port and Species:Gear interactions

## 5 Landings Comparision

## 6 Time block species sample sizes

## 7 Model misspecification self-test

## 8 Diagnostic template and fully stratified predictive performance
